PROFESSIONAL SUMMARY

Senior System Analyst with 7+ years of experience delivering enterprise-scale banking, fintech, investment, and digital platforms. Specialized in system integration, API design, microservices transformation, solution analysis, and requirements engineering. Proven track record in launching MVP products, modernizing legacy systems, establishing analytical processes from scratch, and translating business needs into scalable technical solutions.

CORE EXPERTISE

Requirements Engineering • Solution Analysis • System Integration • API Design (REST/SOAP) • Microservices Architecture • Kafka • BPMN • UML • ERD • Data Modeling • Data Mapping • Functional & Non-Functional Requirements • Stakeholder Management • Agile Delivery

Senior System Analyst — Lembitech (Remote)

Dec 2025 – Present

Responsibilities

- Gather and formalize functional, technical, and integration requirements.
- Design integration processes across multiple enterprise systems.
- Define API contracts, authentication, validation, and error-handling rules.
- Prepare technical specifications, sequence diagrams, and integration documentation.

Key Achievements

- Delivered 3 integration projects within 5 months.
- Designed synchronization processes for customer, order, and contract data.
- Contributed to a centralized integration platform connecting OEM systems and DMS platforms.
- Implemented API orchestration and automated data export processes.

Senior System Analyst — Eqvanta (Remote)

Jan 2025 – Sep 2025

Responsibilities

- Established the business analysis function from scratch.
- Gathered and formalized requirements for an investment platform.
- Produced BPMN/UML diagrams, ERD models, and functional specifications.
- Participated in solution design and product discovery.

Key Achievements

- Successfully launched MVP of a new investment platform.
- Built documentation standards, templates, and Confluence knowledge base.
- Introduced automated investment reporting and role-based access capabilities.
- Created a scalable analysis process adopted across the project.

System Analyst — Raiffeisen Bank Russia

Feb 2023 – Dec 2024

Responsibilities

- Collected and analyzed requirements for a high-load customer notification platform.
- Modeled business processes and integration flows.
- Participated in migration from monolithic architecture to microservices.
- Coordinated requirements across CRM, transactional, and banking systems.

Key Achievements

- Reduced requirements clarification effort by approximately 50% through legacy system analysis.
- Improved onboarding efficiency by restructuring platform documentation.
- Contributed to migration of key modules to microservices architecture.
- Optimized notification routing logic, helping reduce operational messaging costs.

Lead System Analyst — SBER

Feb 2021 – Jan 2022

Responsibilities

- Led analytical activities within a banking transformation program.
- Designed requirements management and approval processes.
- Defined integration requirements for enterprise service bus solutions.
- Coordinated requirements across multiple banking systems.

Key Achievements

- Successfully launched MVP of a new front-office platform.
- Built and standardized analytical processes and templates.
- Reduced analysis effort by approximately 50% through legacy system formalization.

- Mentored analysts and participated in hiring activities.

Business Analyst — Andersen / Aston

Jan 2022 – Feb 2023

Responsibilities

- Participated in product discovery and MVP definition.
- Prepared Vision & Scope, SRS, user stories, and requirements.
- Designed integrations using REST APIs and Kafka.
- Developed data models and integration specifications.

Key Achievements

- Successfully launched MVP of a greenfield real-estate platform.
- Contributed to service-oriented architecture (SOA) design.
- Designed integrations between internal and external systems.
- Established reusable documentation templates and standards.

Business-System Analyst — Cinimex

2019 – 2021

Responsibilities

- Gathered requirements for Core Banking System enhancements.
- Designed BPMN/UML diagrams and process documentation.
- Produced UI mockups, printable forms, and specifications.
- Coordinated testing activities with QA and business stakeholders.

Key Achievements

- Introduced a new requirements specification format.
- Improved consistency and quality of analytical documentation.
- Supported delivery of multiple banking system enhancements.

EDUCATION

Bachelor of Science in Informatics in Management — International Academy of Business and Management, Moscow, Russia
